

"Site Valet and WebThing's wide range of Quality Assurance Tools have set the standard to aspire to. Very impressive work, from a very impressive company." – **Terje Bless, developer of the W3C Validator.**

Site Valet is the leading Quality Assurance software for websites and intranets, including a range of powerful diagnostic and monitoring tools for maintenance, troubleshooting and repair. It is the only product from a UK company to be recognised by the Worldwide Web Consortium (W3C) in the field of Evaluation and Repair.

A Health Check for your Intranet

Is your intranet legal?

Can a blind person or an arthritis sufferer make **full** use of your network? Or could it be a costly and disruptive exercise to meet your obligations under Disability Discrimination legislation?

Is your intranet standards compliant?

If your network is fully compliant with Internet standards, you add new components as easily as you plug in an electrical appliance at home. If not, you may be locked in to second-best, and at the mercy of a vendor who may not support the next thing you need.

You'd be surprised how many vendors lock you in by stealth. Shouldn't you know?

Is your intranet really useful?

Do people use it with pleasure or reluctantly? How do you ensure all the vital information is kept up to date? Is it really responsive to your users' needs? How many man-hours do you spend on maintenance?

How do I know if all is well?

Site Valet will tell you when something needs attention – be it an error, a change that is outside your control, or routine scheduled maintenance. And of course, Site Valet will help you fix it!

"The absolute best real validator I know of. Nothing bad said about Gerald, Terje and their W3 validator, it works as it is supposed to do. But as always, things can be made better from the users standpoint, and that is what Nick has spent time on. His online tools are all worth a visit, and high marks for quality." – **Jan Roland Eriksson, CSS Pointers Group.**

"I've always liked SP's parse tree, but I was never going to convince the staff to use W3C's version. The new Page Valet is very easy on the eye, whilst keeping the [X/SG]ML correctness we'd expect from WebThing. Great." – **Calum I Mac Leod, Bordernet Ltd.**

"We have deployed WebThing's Valet technology on corporate sites to provide instant, automated checks and reports on consistency, quality and conformance, and are very satisfied with the results." – **Simon Brooke, Weft Technology Ltd.**
